

Changing the face  
of aesthetics.

Leading-edge aesthetic equipment for the professional aesthetic industry. We provide innovative, non-invasive and cutting-edge technology integrated in high-quality products that represent advanced research and development strategies.

## Sapphire 3® IonixLight

Finest method of skin refinement.

---

The Sapphire 3® IonixLight® offers the finest method of skin refinement available today. It offers state-of-the-art technology that transforms the skin without discomfort or recovery time.

The Sapphire 3®  
IonixLight® integrates  
the most requested  
applications in one  
system to maximize  
skin treatments.

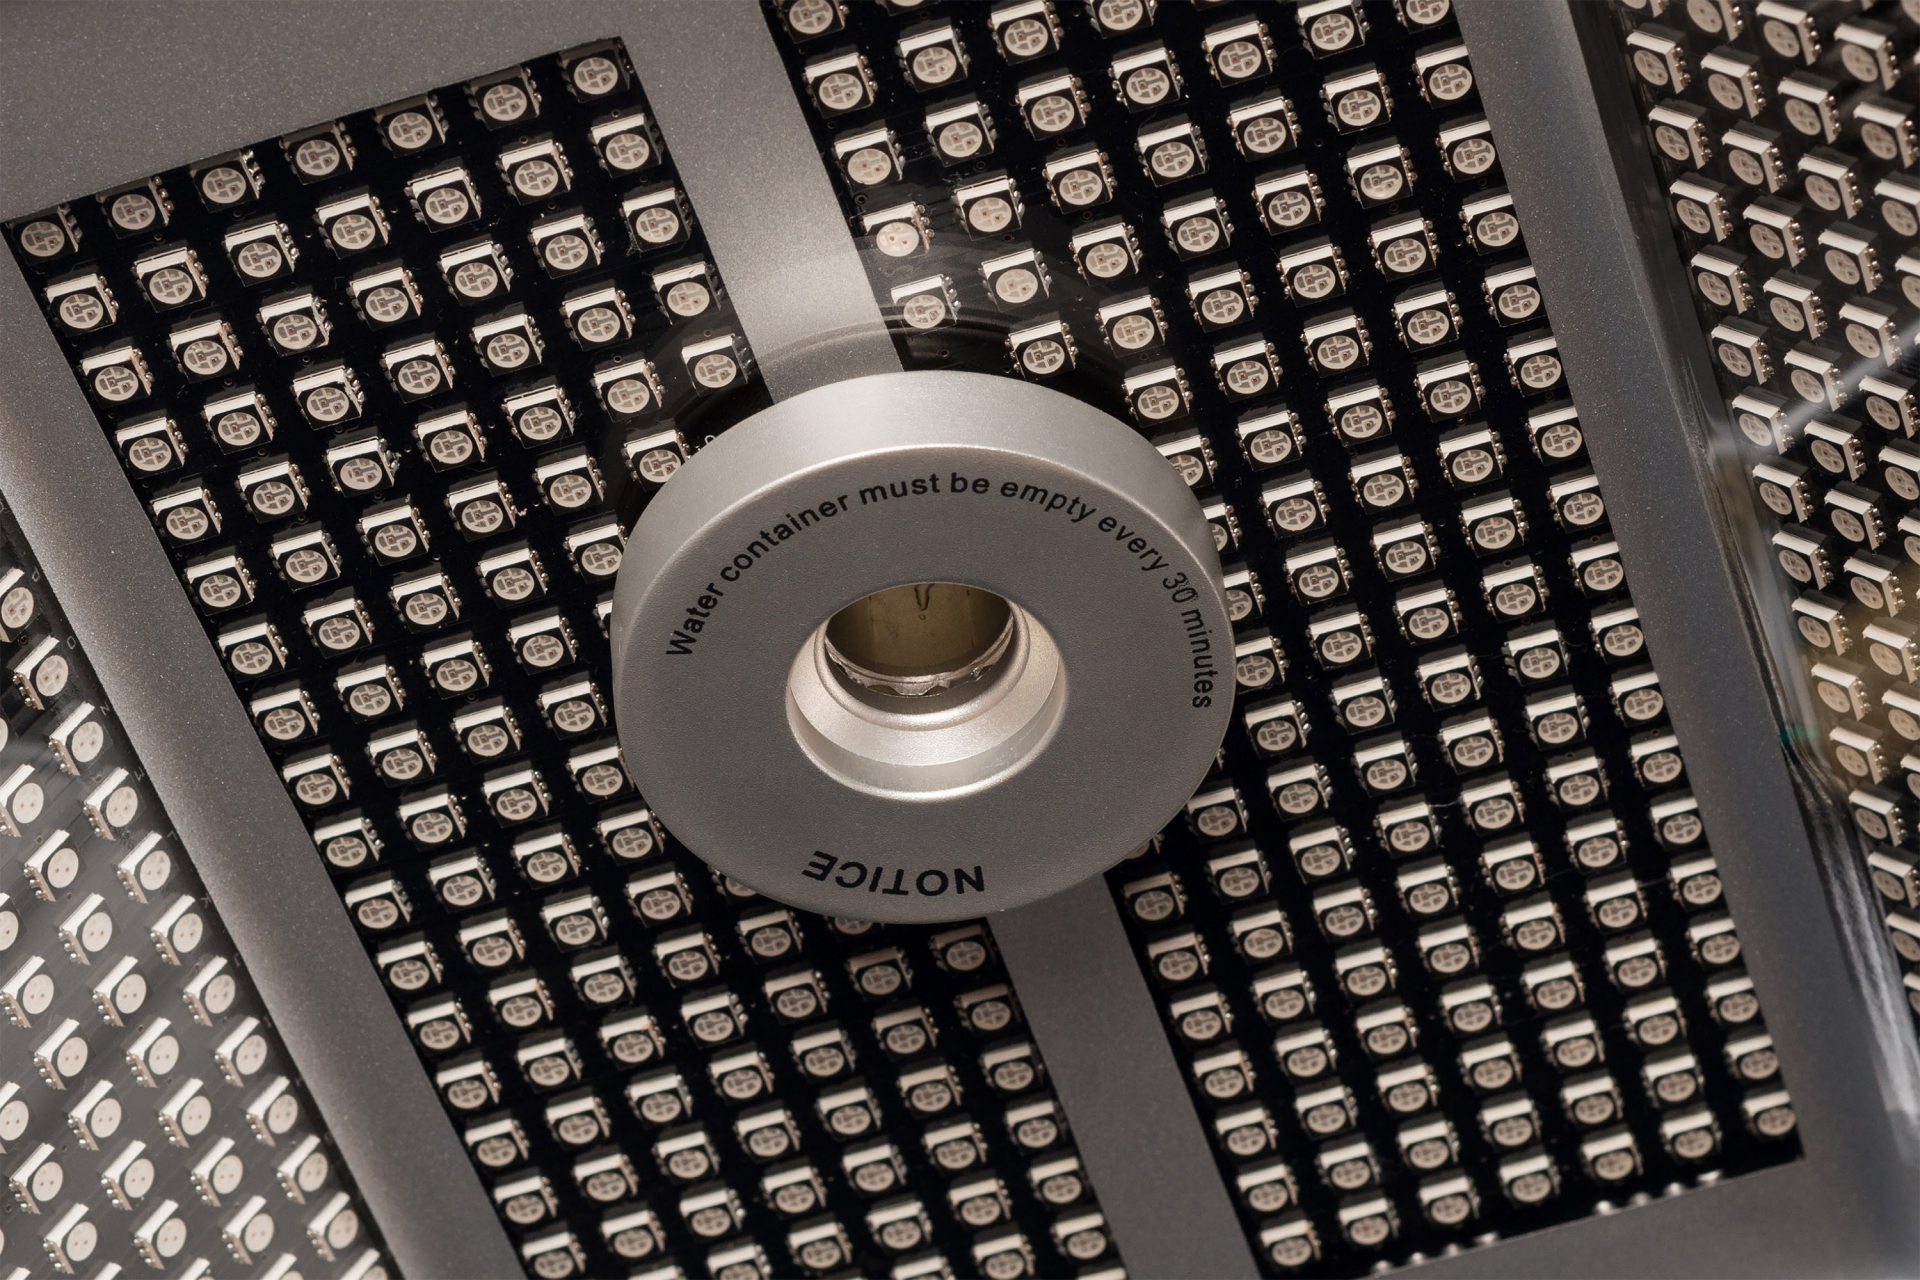

## Sapphire3® IonixLight®

Revolutionary technology.

---

With the Sapphire 3® IonixLight®, all modalities are connected to one base and it uses the latest technology in Light Therapy coupled with Negative Ion Therapy. The unit is sleek and simple to use. It has preset timers for accurate usage, as well as, keeping all of your Sapphire 3® IonixLight® facials within appointment parameters.

Water container must be empty every 30 minutes

NOTICE

## Sapphire 3® OxyLight®

Sleek, all-in-one system.

---

OxyLight® offers state-of-the-art technology that transforms skin without discomfort or recovery time. This system is based on three criteria: simplicity, adaptability and effectiveness.

The Sapphire 3®  
Oxylight® Experience  
combines all best  
science - backed  
treatments into one  
amazing session.

## Sapphire 3® OxyLight®

Not just Oxygen and Light.

---

The Sapphire 3® OxyLight® offers optimal non-invasive skin rejuvenation treatments in a sleek, all-in-one system that is perfect for any aesthetic practice. At its core the OxyLight uses six modalities in concert including: Oxygen, Light, Microcurrent, Ultrasound, Diamond Abrasion and Negative Pressure Vacuum.

## Juvesa® ProSkin

Express mobile freedom.

---

Juvesa® ProSkin offers the finest application for skin refinement available in the market today. Thanks, in part, to the incredible advances in light and micro-current technologies, Juvesa® ProSkin has the versatility to rejuvenate the skin, allowing discerning individuals to put their best face forward.

Juvesa® ProSkin  
delivers effective  
light therapy skin  
rejuvenation  
procedures with  
express mobile  
freedom.

## Juvesa® ProSkin

Aesthetically pleasing design.

---

Juvesa® ProSkin System is a state-of-the-art technology that rejuvenates the skin without any discomfort or requiring recovery time. As the aesthetics industry continues to grow at an ever-increasing rate for non-invasive procedures, this is the perfect opportunity to offer the Juvesa® therapy to gain market in the extremely competitive aesthetic industry and create a following for the now highly in demand light, oxygen, ultrasound and micro-current therapies.

---

## The IonixLight Experience

The IonixLight Experience combines all science-backed treatments into one amazing session. Starting with a calming topical skin cleansing, your esthetician will perform a diamond dermabrasion, providing deep exfoliation to prepare the skin for the pure Oxygen (O<sub>2</sub>) and light permeation.

Next, you are treated to a lymphatic system cleansing with negative pressure on the face and the neck. Deep hydration is then applied through a high pressure oxygen spray. The exclusive Biosonix combines ultrasound with LED light to deliver serum, moisturizer, and vitamins deep inside the living epidermis.

Another exclusive is the Myolight microcurrent combined with LED light to firm, tone, tightening, contour, and retrain the scaffolding muscle structure on your face. As a last step, you will relax underneath the IonixLight LED light panel as pure Oxygen with Negative Ions is silently absorbed into the skin. It is truly an experience that will have you immediately ready for the red carpet, that 1 o'clock board meeting, or a filter-free social media photo.

## Step 1

---

### Diamond dermabrasion

Comprises a hand piece utilizing suction via a wide range of diamond encrusted tips with ergonomics designs that are shaped to fit the face, eyes, lips and body. Promotes a deeper, more thorough exfoliation which is vacuumed to multiple filtration systems resurfacing and polishing the skin with no downtime.

## Step 2

---

Lymphatic  
massager

Also called Negative Pressure Therapy, this treatment is used to stimulate lymph flow and remove toxins from the body. This also strengthens the functions of tissue, promotes blood circulation, and improves the appearance of cellulite on the neck area.

## Step 3

---

### Oxygen Atomizing Spray

This tool delivers moisture rich oxygen onto the deepest layer of the epidermis, which activate cells, stimulates blood circulation, and increases hydration. 95% pure oxygen is activated through a process called Pressure Swing Absorption. This kills surface bacteria.

## Step 4

---

Biosonix  
ultrasound

This innovative tool couples full spectrum LED light and continuous 3MHz transducer ultrasound waves creating the Piezoelectric Effect and effectively penetrating the skin approximately 3 mm to deliver vitamins and nutrients through the phonophoresis process.

## Step 5

---

Myolight  
microcurrent

Utilized with full spectrum LED light, the Myolight delivers low-level current that mimics the body's natural current to provide instant toning and contouring deep below to the facial muscles. This also stimulates adenosine triphosphate (ATP) production, which drives the creation of structural collagen and elastin.

## Step 6

---

### LED Light Therapy with Oxygen

The OxyLight injects 95% pure, dry Oxygen through the 12 nozzles on the full spectrum LED Light Panel. The IonixLight releases a gentle Negative Ion mist (pure, Negatively Ionized Oxygen) from one center based nozzle while utilizing blue, yellow and red LED Light Therapy.

Offered by international celebrity facialists, Manhattan dermatologists, and well-known luxury skin experts in Hollywood, the Oxylight Experience as a must-have treatment option when achieving celebrity status skin.
